(54) Title: MOVER FOR LINEAR OSCILLATORY ACTUATOR

(57) Abstract: The present invention relates to a mover for a linear oscillatory actuator to be linearly reciprocated, which is easy to assemble and manufacture and has improved durability. In a mover according to the present invention, permanent magnets and cores which have corresponding shapes are alternately arranged with each other, and this arranged state is fixed by virtue of fastening means. In another mover according to the present invention, plate-shaped cores are stacked one upon another, permanent magnets are inserted into insertion holes defined in the plate-shaped cores, and this inserted state is fixed by virtue of fastening means.
